

 **CareTech**®

Call for care

Transmits both alarm and position
Built-in dementia alarm

Elvis Transponder

When developing products, CareTech focuses on the needs they have to satisfy. CareTech's Elvis Transponder is the result of many years of experience and accumulated knowledge of the features that users, care staff and relatives value most of all.

In an emergency, the ability to quickly determine the location of a person who activated an alarm can be critical in reaching the correct decision on the action to be taken. CareTech's Elvis Transponder gives care staff access to information on the location of a person who has activated an alarm, and alerts them if someone under their care tries to leave the area. The alarm transponder can be connected wirelessly to CareTech's various alarm systems or to an existing alarm system to create a reassuring complete solution for those living in their own homes or in sheltered accommodation.
